

FLEXIBLE DUCT CONNECTOR

Hardcast Hardware

CIRCU-FLEX™

Spine-Reinforced Duct Connector

THE COMPANION TO CONNECTOR+PLUS

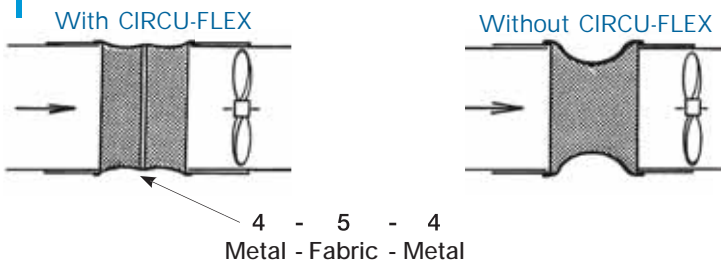

NORTH AMERICA'S FINEST CONNECTOR PRODUCT with double-fold offset seam, now available with CIRCU-FLEX.

A positive response to fabric collapse at circular negative and negative pressure inlets on axial flow fans and blowers.

Excellent for non-collapsing flexible duct connector collars.

Industry Exclusive
PATENTED technology

Patented CIRCU-FLEX features the patented POSI-LOK™ two-part metal strip assembly, which is mechanically clenched along the fabric portion of our standard connector and floats freely without making contact with the metal edges of the connector. When cut from a CIRCU-FLEX coil and formed into a collar, the stiffness of the resulting connector maintains its rigidity, even at negative pressures of 8-10" water gauge. This minimizes the inward collapse of the fabric and maintains unrestricted airflow through the connector. Available in NEOPRENE and VINYL-FLEX. Fabric is tested in accordance with ANSI/UL 214 for flame propagation of fabrics and films. City of Los Angeles Approval RR #8434; ASTM E84.
